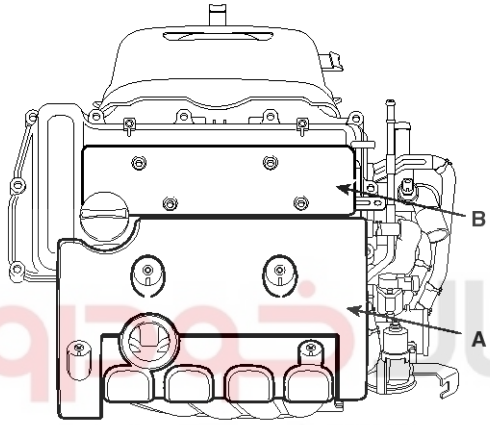
Compession Pressure Inspection

NOTICE

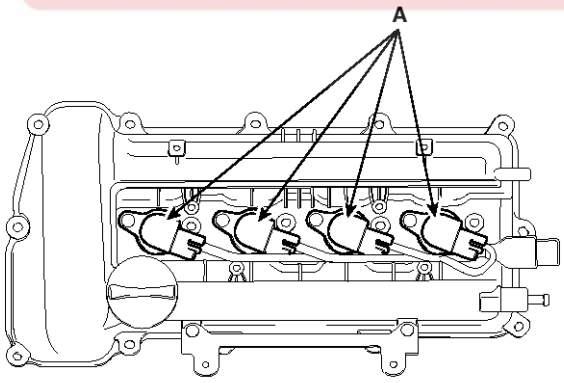
If the there is lack of power, excessive oil consumption or poor fuel economy, measure the compression pressure.

1. Make sure the oil in the crankcase is of the correct viscosity and at the correct level and that the battery is correctly charged. Operate the vehicle until the engine is at normal operating temperature. Turn the ignition switch to the OFF position.
2. Remove the engine cover (A) and the engine center cover (B).



SFDEM8005L

3. Remove the ignition coil(A).

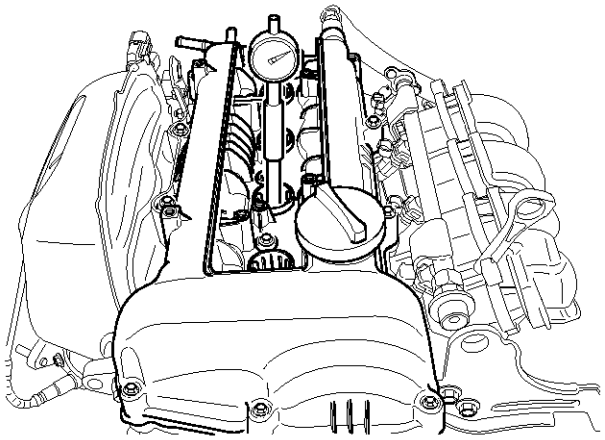


SEDEM7302L

4. Remove the spark plugs.

   Using a 16mm plug wrench, remove the 4 spark plugs.

5. Check the cylinder compression pressure.
   1) Insert a compression gauge into the spark plug hole.



SFDEM8006L

   2) Set the throttle plate in the wide-open position.
   3) While cranking the engine, measure the compression pressure.

      NOTICE

      Always use a fully charged battery to obtain engine speed of 250rpm or more.

   4) Repeat step 1) through 3) for each cylinder.

      NOTICE

      This measurement must be done in as short time as possible.

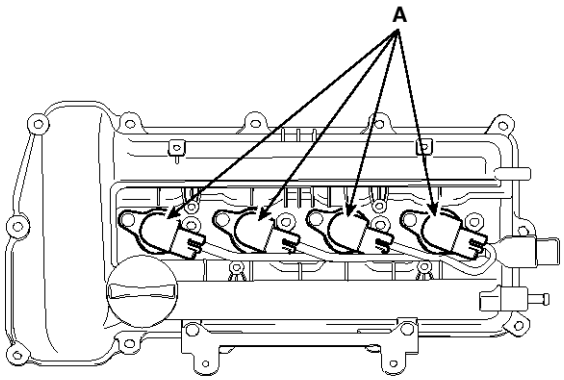
Compression pressure

Standard : 1225.83kPa (12.5kg/cm², 177.79psi) (200~250 rpm)
Minimum : 1078.73kPa (11.0kg/cm², 156.46psi)
Difference between each cylinder :
98kPa (1.0kg/cm², 14psi) or less

   5) If the cylinder compression in one or more cylinders is low, pour a small amount of engine oil into the cylinder through the spark plug hole and repeat step 1) through 3) for cylinders with low compression.
      - If adding oil helps the compression, it is likely that the piston rings and/or cylinder bore are worn or damaged.
      - If pressure stays low, a valve may be sticking or seating is improper, or there may be leakage past the gasket.

6. Install the spark plugs.

7. Install the ignition coil(A).



SEDEM7302L

8. Install the engine cover(A) and the engine center cover(B).

Tightening torque :
7.8 ~ 11.8N.m (0.8 ~ 1.2kgf.m, 5.8 ~ 8.7lb-ft)

Installation

Installation is in the reverse order of removal.

Perform the following :

- Adjust the shift cable.
- Adjust the throttle cable.
- Refill the engine with engine oil.
- Refill the transaxle with fluid.
- Refill the radiator and reservoir tank with engine coolant.
- Bleed air from the cooling system
  - Start engine and let it run until it warms up. (until the radiator fan operates 3 or 4 times.)
  - Turn Off engine. Check the coolant level and add coolant if needed. This will allow trapped air to be removed from the cooling system.
  - Put the radiator cap on tightly, then run engine again and check for leaks.
- Clean the battery posts and cable terminals with sandpaper, assemble them and then apply grease to prevent corrosion.
- Inspect for fuel leakage.
  - After assembling fuel line, turn on the ignition switch (do not operate the starter) so that the fuel pump could run for approximately two seconds and fuel line could be pressurized.
  - Repeat this operation two or three times and check for fuel leakage at any point in the fuel line.

   NOTICE

   - *Mix the recommended antifreeze with an equal amount of water in a clean container.*
   - *Use only genuine antifreeze/coolant.*
   - *For best corrosion protection, the coolant concentration must be maintained year-round at 50% minimum. Coolant concentrations less than 50% may not provide sufficient protection against corrosion of freezing.*
   - *Coolant concentration greater then 60% will impair cooling efficiency and are not recommended.*

   CAUTION

   - **Do not mix different brands of antifreeze/coolants.**
   - **Do not use additional rust inhibitors or antirust products; they may not be compatible with the coolant.**
6. Start engine and allow coolant mixture to circulate.

⚠CAUTION

- **Insert the SST between the oil pan and the ladder frame by tapping it with a plastic hammer in the direction of ① arrow.**
- **After tapping the SST with a plastic hammer along the direction of ② arrow around more than 2/3 edge of the oil pan, remove it from the ladder frame.**
- **Do not turn over the SST abruptly without tapping. It be result in damage of the SST.**

Inspection

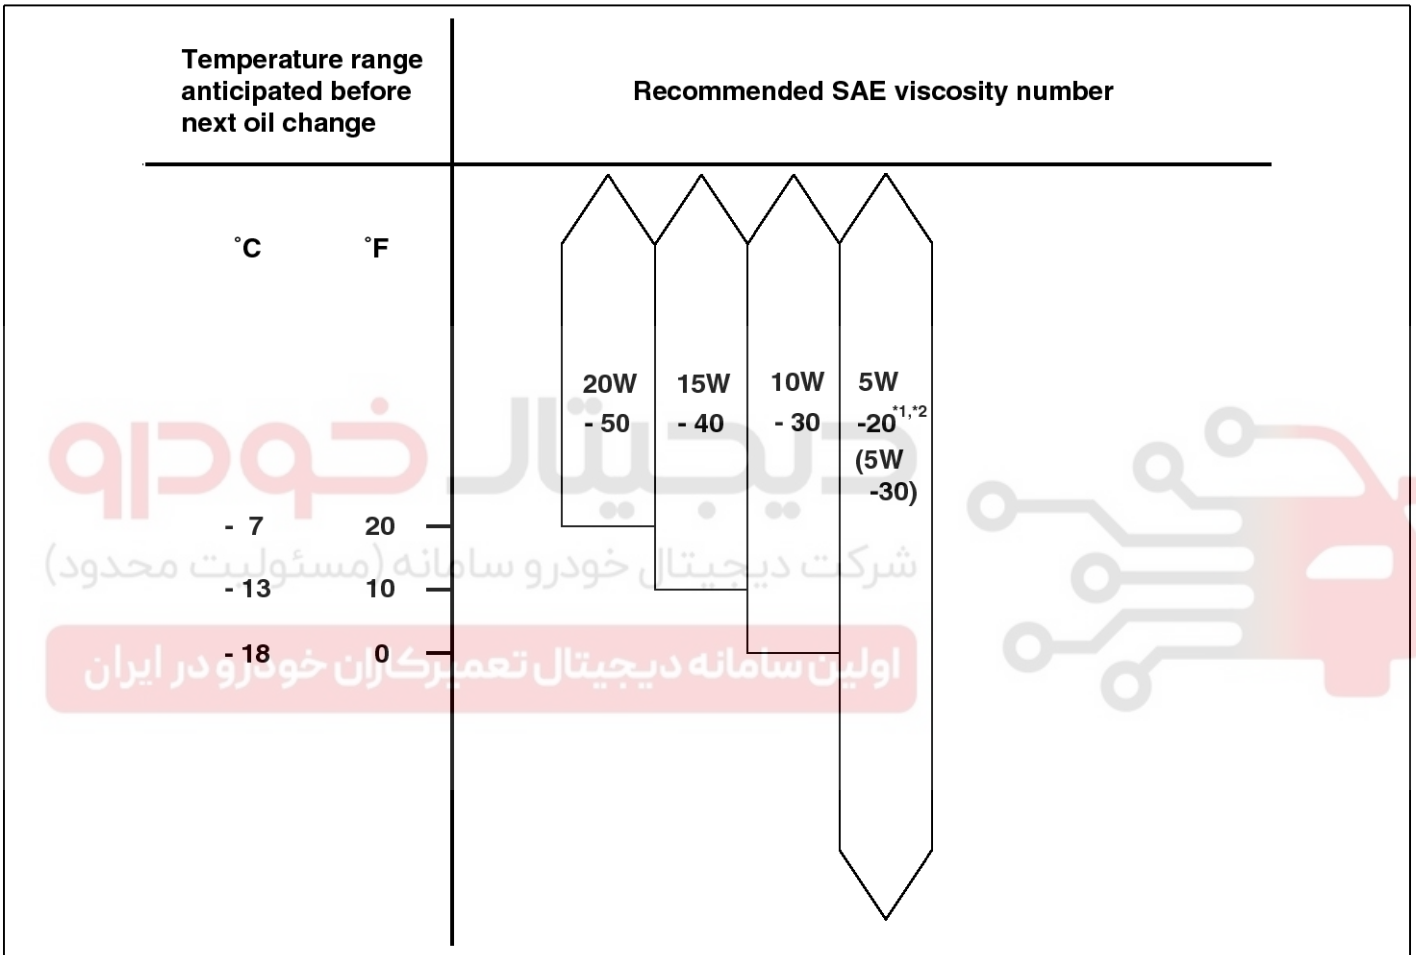
Selection Of Engine Oil (Except For Europe)

Recommendation (except Middle East) : 5W-20/GF4&SM (If not available, refer to the recommended API or ILSAC classification and SAE viscosity number.)

API classification : SL, SM or above

ILSAC classification : GF3, GF4 or above

SAE viscosity grade : Refer to the recommended SAE viscosity number.



***1 If 5W-20 / GF4 engine oil is not available, 5W-30 or secondary recommended engine oil for corresponding temperature range can be used.**

***2 In Middle East, do not use the engine oil of viscosity grade SAE 5W-20.**

SAMM29103L

NOTICE

For best performance and maximum protection of all types of operation, select only those lubricants which :

1. *Satisfy the requirement of the API or ILSAC classification.*
2. *Have proper SAE grade number for expected ambient temperature range.*
3. *Lubricants that do not have both an SAE grade number and API or ILSAC service classification on the container should not be used.*

Engine Oil

1. Check the engine oil quality.

   Check the oil deterioration, entry of water, discoloring of thinning.

   If the quality is visibly poor, replace the oil.

2. Check the engine oil level.

   After warning up the engine and then 5 minutes after the engine stop, oil level should be between the "L" and "F" marks in the dipstick.

   If low, check for leakage and add oil up to the "F" mark.

NOTICE

Do not fill with engine oil above the "F" mark.

Installation

Oil Pan

1. Install the oil pan.
   1) Using a razor blade and gasket scraper, remove all the old packing material from the gasket surfaces.

      NOTICE

      Check that the mating surfaces are clean and dry before applying liquid gasket.

   2) Apply liquid gasket as an even bead, centered between the edges of the mating surface.

Liquid gasket : TB 1217H or equivalent

NOTICE

- *To prevent leakage of oil, apply liquid gasket to the inner threads of the bolt holes.*
- *Do not install the parts if five minutes or more have elapsed since applying the liquid gasket.*

  Instead, reapply liquid gasket after removing the residue.
- *After assembly, wait at least 30 minutes before filling the engine with oil.*

   3) Install the oil pan(A) with the bolts.

      Uniformly tighten the bolts in several passes.
