IGN(a)	IGN(a)
ACC	ACC

The diagram illustrates the electrical wiring for various vehicle lights. At the top, a legend identifies the power sources: 30(ENG), 30IP(a), 30IP(b), IGN1, IGN(a), and ACC. The main components and their wiring are as follows:

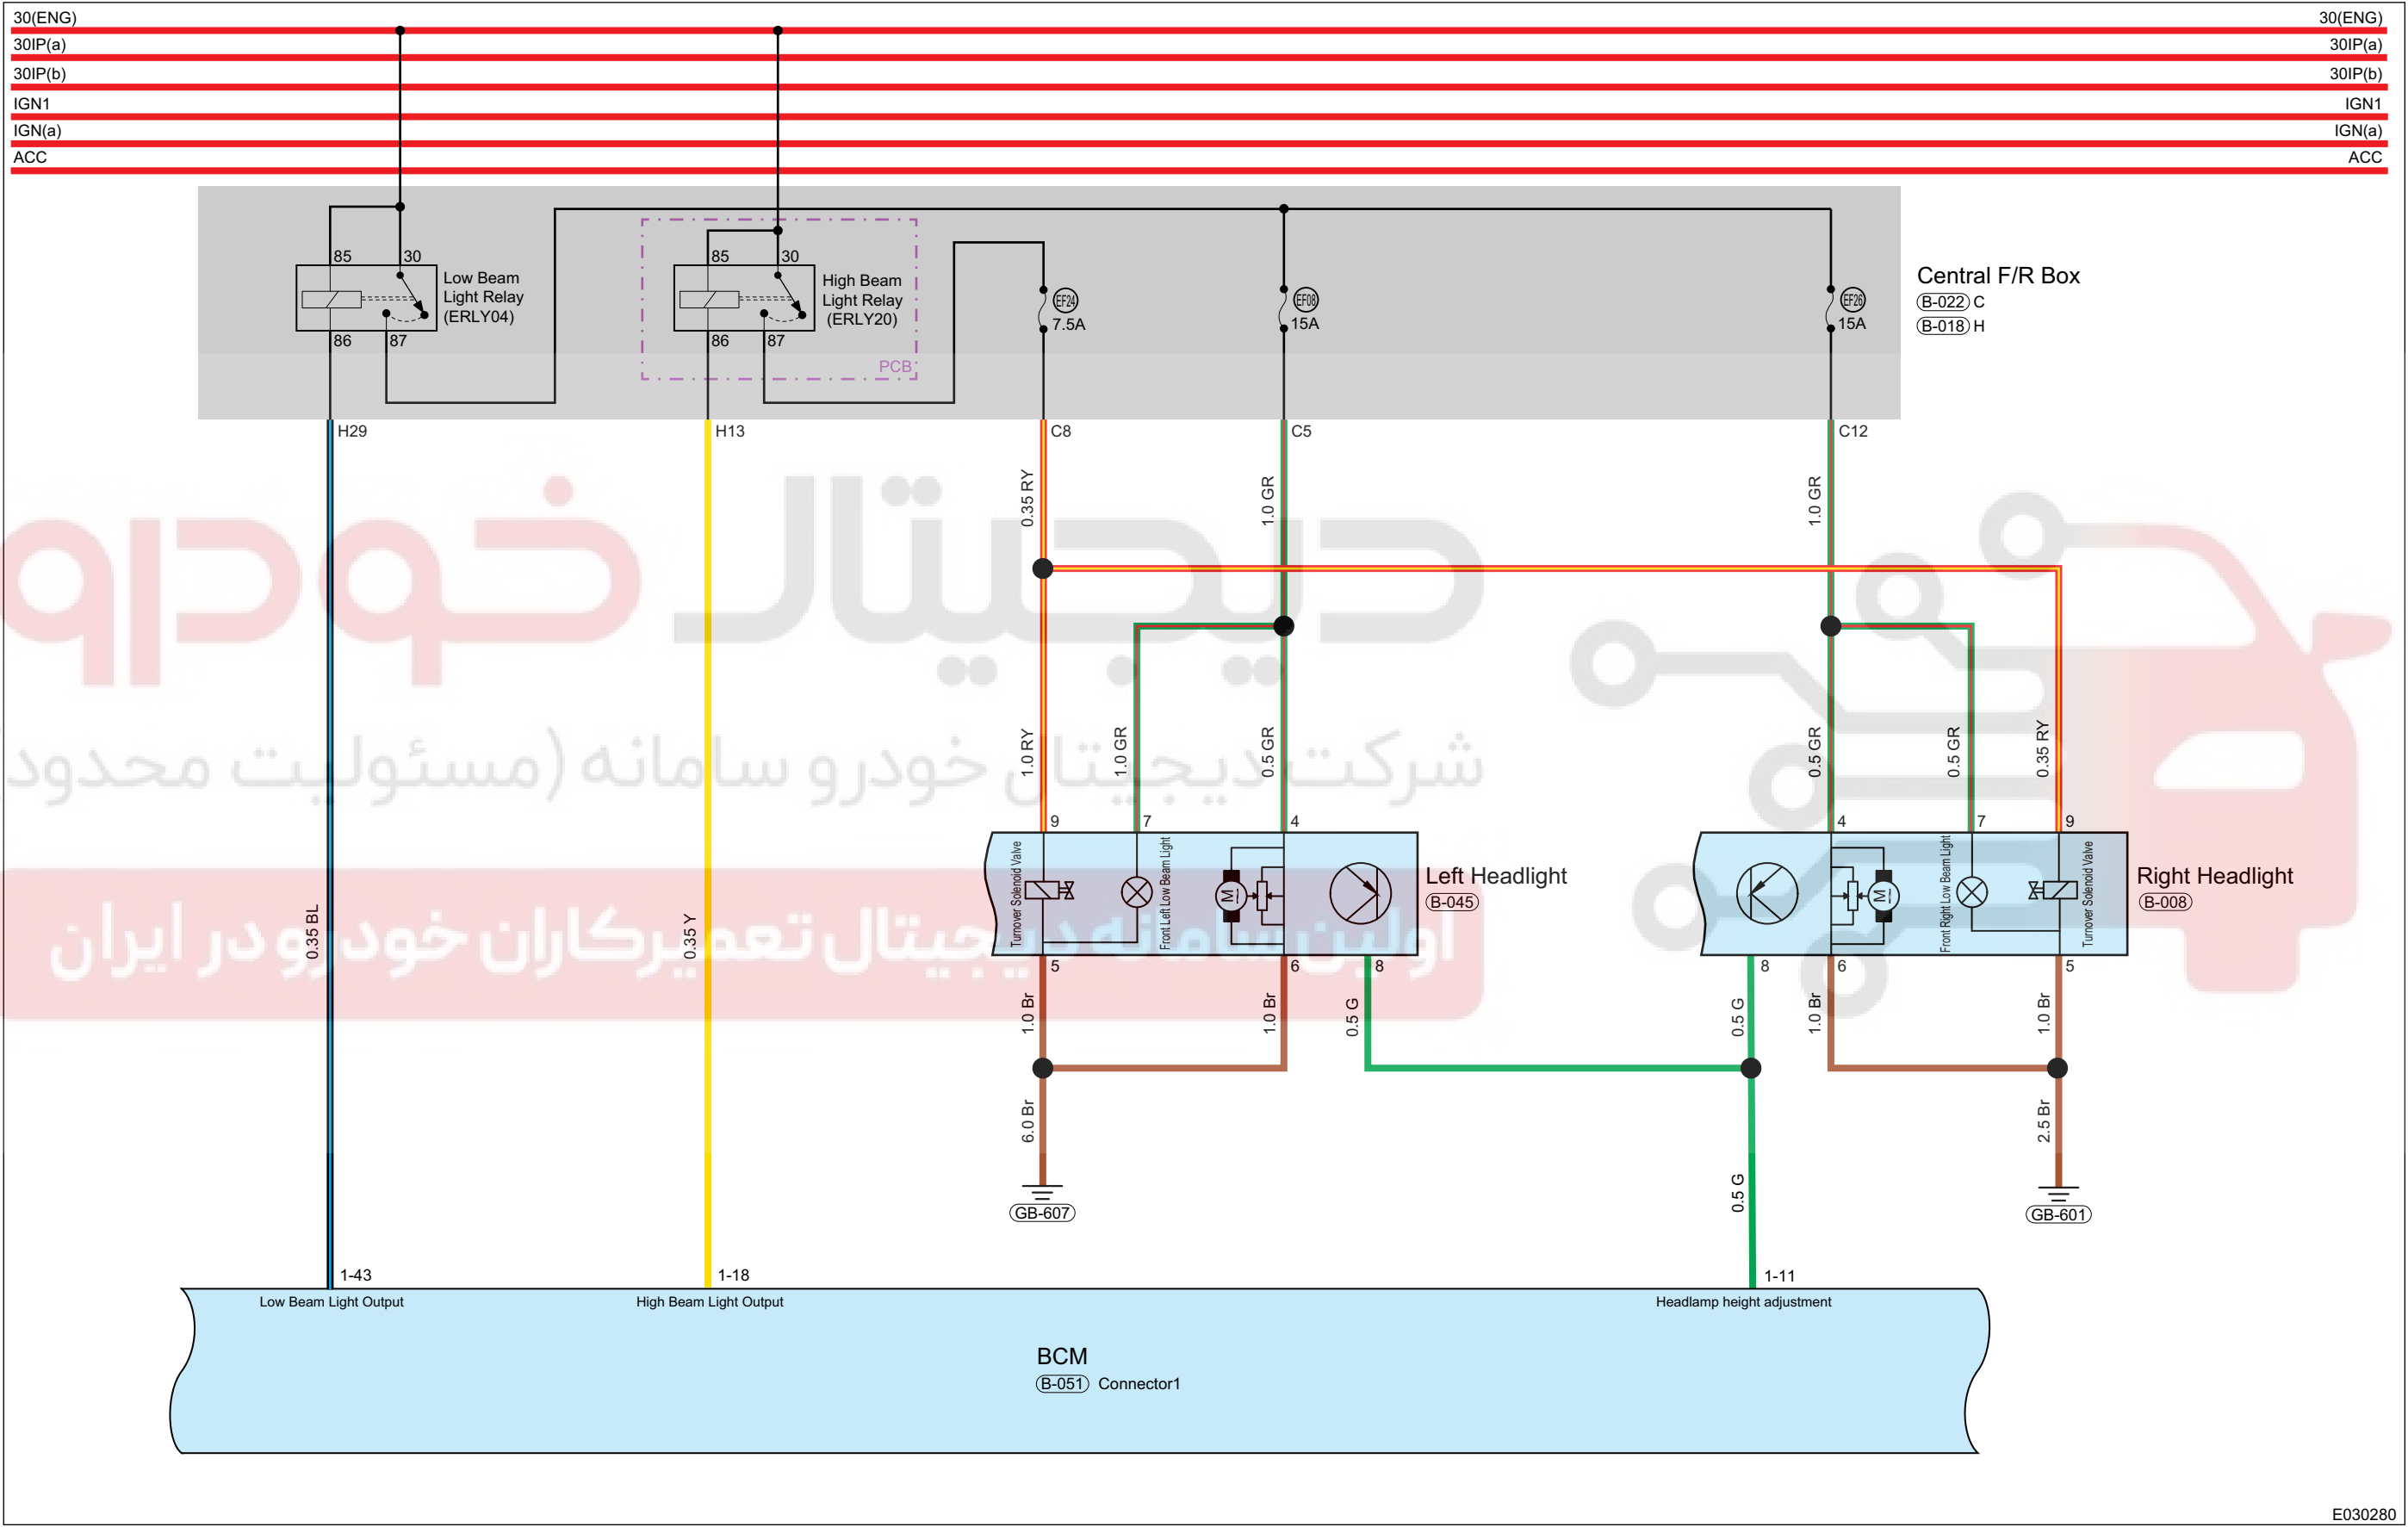

- Combination Light (Movable Part) RR (T-016):** Connected to a 3.0 Br wire to ground (GT-701) and a 0.5 Br wire to a 0.5 GW wire. A 0.5 W wire connects to a 0.5 GW wire (T-013, B-102).
- Combination Light (Movable Part) RL (T-009):** Connected to a 6.0 Br wire to ground (GB-615) and a 0.5 Br wire to a 0.5 GW wire. A 0.5 W wire connects to a 0.5 GW wire (T-001, B-101).
- Fixed Combination Light RL (B-133):** Connected to a 6.0 Br wire to ground (GB-615) and a 0.5 Br wire to a 0.5 GW wire.
- Fixed Combination Light RR (B-099):** Connected to a 2.0 Br wire to ground (GB-610) and a 0.5 Br wire to a 0.5 GW wire.
- Daytime Running Light LH (B-047):** Connected to a 2.5 Br wire to ground (GB-607) and a 0.5 GrY wire to the Left Daytime Running Light Output (5-14).
- Daytime Running Light RH (B-007):** Connected to a 2.5 Br wire to ground (GB-601) and a 0.5 LG wire to the Right Daytime Running Light Output (5-15).

All ground connections are made to a common ground point. The BCM (B-054) Connector5 is shown at the bottom, providing the power source for the system.
